Energy Balance of Solar-Assisted Bio-Waste Drying in Autonomous On-Site Drying Units (AOSDUs): Experimental Results and Scale-Up Projections for the LIFE-INOFEED Project

I. Grammatikakis, G. Daskalakis, G. Grammatikakis, I. Christoforakis, C, Moschou, C. Bouki and M. Theodorakopoulou

TM SOLUTIONS LTD, Greece

Abstract

ATTENTION: Only abstracts in English will be accepted. Please use British spelling (e.g. colour vs color). Keep text in singe paragraph. Prefer SI units, use space between number and unit (keep % and ± signs with number). When using references, please format as Smith et al. (2021) or (Smith et al., 2021) and include full reference list after the abstract (also include the title References before actual references). Write text directly on the form or use the functionality "paste as plain text". Alternatively, you can first copy the text in a notepad and then on the form. This will ensure text editor formatting is removed which is required for pdf production.

In the references section, please add references in the following format:

Smith, J., Brown, E.F., Green, S., 2021. On using references. Journal of Conferences, 2 (1) p.5-8. doi: 123.123xx.123

Add any acknowledgements to the Acknowledgements section.

Keywords: bio-waste, onsite treatment, solar drying, energy balance

Acknowledgments: This research is co-funded by the EU LIFE Environment program, with name “Innovative Onsite Treatment of Food Related Wastes for Viable Production of Animal Feed”, project number 101215561 and project acronym “LIFE24-ENV-EL-LIFE-INOFEED”
